React Task 1

GitHub Profile Viewer

Build • Learn • Grow

Overview

In this task, you will build a simple React application that allows users to search for a GitHub username and view basic profile information. This task focuses on learning React fundamentals through hands-on practice.

What You Need to Build

- Input field for GitHub username
- Search button
- Display profile details after search

Profile Details

- Avatar
- Name
- Bio
- Followers & Following count
- Public repositories count

API

`https://api.github.com/users/{username}`

Tech Stack

- React.js
- Tailwind CSS
- Axios or Fetch API

Day-wise Suggested Plan

Day 1 – Setup & Basics

- Create React app
- Set up Tailwind CSS
- Build input field and search button
- Use useState for input handling

Goal: User can type a username and click Search

Day 2 – API Integration

- Call GitHub Users API
- Log API response
- Store response in state

Goal: Successfully fetch GitHub user data

Day 3 – Display Profile Data

- Create ProfileCard component
- Display profile details using props

Goal: Show profile details on the screen

Day 4 – Loading & Error Handling

- Show loading state
- Show message if user not found

Goal: Handle real-world scenarios properly

Day 5 – Cleanup & Submission

- Improve UI
- Remove console logs
- Push code to GitHub
- Optional deployment

Goal: Clean and working React app
